

DIGITALWAX® 029X

High-speed system

High productivity rapid manufacturing solution

Working area (x, y, z): 150x150x200 mm

TTT SYSTEM: The TTT System

(Tank Translation Technology) consists of an electromechanical device that automatically shifts the resin tank during the growing of the model: it allows to reduce the localized wear of the tank caused by the laser beam irradiation through the same area, **improving both the life of the resin tank and the efficiency of the building process.**

DigitalWax 029X rapid manufacturing system has been specifically developed for high quality rapid manufacturing applications.

High accuracy, large size capacity and the lowest running cost in the market are the main features of this innovative system. Fully compatible with the majority of 3D CAD/CAM systems, DigitalWax 029X is the perfect solution either for rapid prototyping and rapid manufacturing of complex parts, delivering the highest level of accuracy and surface quality.

A quick 3D printout with high surface quality can be very helpful during the concept design phase: the DM210 ceramic nano-filled resin enables a designer to visually inspect the design for form, fit, and function.

The new DL350 polypropylene-like resin has been specifically developed by DWS for flexible, fully functional prototypes.

DigitalWax 029X allows the production of lost wax casting products as well by a simple and quick material change.

Standard accessories supplied with DigitalWax 029X:

- No. 1 Building platform mm 160x160 (working area: mm 150x150)
- No. 1 Resin tank mod. RT500
- No. 1 Set of handling tools
- No. 1 Personal Computer with 19" LCD monitor
- No. 1 UPS 650VA 230V 50/60 Hz
- No. 1 DigitalWax 029X Controller Software License
- No. 1 DigitalWax 029X Software Suite
- No. 1 User manual

BluEdge® laser source

TTT - Tank Translation Technology

High speed and accuracy

High surface quality

Extra-long life UV laser

No lamp replacement

No calibration

Lowest running cost

Technical data:

| | |
|-------------------------------------|----------------------------|
| Laser source: Solid State BluEdge® | BE-1800C |
| Working area (x, y, z): | 150 x 150 x 200 mm |
| Slice thickness*: | 0,01 – 0,10 mm |
| Laser scanning speed: | 5000 mm/sec |
| Scanning method: | Galvanometer |
| Software: | DigitalWax 029X Controller |
| OS: | Windows 7 |
| Input file format: | .stl - .slc |
| Machine size: | 610x660x1400 mm |
| Weight: | 150 Kg |
| Operating Temperature and Humidity: | 22° - 25°C / 60% |
| Electrical consumption: | 500 W |
| Power supply: | AC 230/115 V / 50-60 Hz |

*it depends on the kind of photo-curable resin used.
